

Patient Name:	mallikarjun R	Patient ID:	PT-04152
Age / Gender:	47 Yrs / Female	Scan Date/Time:	2026-07-20 05:23 PM
Contact Mobile:	+9173658595855	Quality Score:	Good Quality / Acceptable

3. CLINICAL SPECIMEN IMAGE & QUANTITATIVE MEASUREMENTS

	Pathological Metric	Value	Interpretation
	Total Lesion Count	1	Localized border anomalies
	Largest Lesion Size	6.8 mm	Maximum diameter deviation
	Average Lesion Size	6.8 mm	Average boundary diameter
	Inflammation Level	Low	Active swelling & expansion
	Redness / Erythema	10%	Vascular congestion score
	Sebum / Oiliness Score	Normal	Sebaceous gland activity

4. PRIMARY AI CLASSIFICATION & URGENCY INDEX

Primary Diagnosis:	Melanoma	AI Confidence:	94.0% (ISIC Verified)
Risk Classification:	High Risk	Clinical Urgency:	Dermatologist Consultation in 24-48 Hours

5. DIFFERENTIAL DIAGNOSES & CLINICAL INCLUSION REASONING

Condition / Diagnosis	Prob.	Visual Chart
Melanoma	94.0%	
Acne Vulgaris	4.2%	
Eczema	1.8%	

The neural classification nodes evaluated the lesion's pigment variations, edge definition, and vascular markings. Alternative diagnoses like Acne Vulgaris and Eczema were excluded due to conflicting boundary symmetry and skin barrier peeling metrics. Analysis engine details: Medicus-Net V2.6.4 (ISIC Challenge Model) running with a processing duration of 0.45 seconds.

6. SKINTINE CARE GUIDELINES & IMMEDIATE ACTIONS

Immediate Action Plan:	Consult with a dermatological oncologist IMMEDIATELY. Fast-track evaluation is critical.
Daily Home Care:	Keep the lesion completely untouched and protected from all UV exposure.
Things to Avoid:	Avoid direct mid-day sunlight, physical friction, and chemical irritants.

7. CLINIC NOTES, AUTHENTICATION & VERIFICATION

Dermatologist Observations & Notes: Rx:	Hospital Stamp & Sign-off:	
	Derm Name: _____	[Verification QR]
	Signature: _____
